

BIO GO M20

ULTRASONIC MISTER FOR SYMBIOTIC TREATMENT OF THE INTERIOR ENVIRONMENT

PROPERTIES

- **Prolongs the effect of the PCC99 professional treatment, constantly bringing an influx of new bacteria into the cars air conditioning system as well as on all the surfaces in the car**
- **Fewer infections**
- **Reduced viral infectivity**
- **Purified spaces**
- **Fewer allergies**
- **Elimination of the causes of odors not just covering them**

DESCRIPTION

BIO GO is a revolutionary, multifunctional, portable device, capable of dispersing the highly concentrated probiotic compound BIO AIR in the form of a mist whether you are at home, at the office, hotel room or car. The large liquid tank and pre-programmed interface will simply work for you so you don't have to worry about the environment around you

Not all surfaces can be treated sufficiently by periodic cleaning. Some are very inaccessible (ceilings, air ducts ...), and others cannot be cleaned often enough (carpet, curtains, radiators ...). Thus, The BIOGO M20 ultrasonic device was developed to constantly treat all surfaces with symbiotic technology. Through ultrasonic vibrations it generates symbiotically charged water particles of only 1µm (1/1000 of millimeter!). This produces a very fine symbiotic fog that distributes quickly through the air and all indoor spaces. Through this fog probiotics and prebiotics are placed on all surfaces in the room. BIOGO M20 generates approximately 1 million probiotics per second, which leads to a load of good bacteria throughout the space after a few minutes.

Prebiotics then increase the development of a good microflora on all surfaces.

DIRECTIONS FOR USE

The device works automatically for a minute and a half every two hours, and the large capacity tank provides at least two months of automatic use
